SUMMARY

I have a drive for education and a passion towards Computer Science. This can be seen from the projects I have completed and the awards I have received from them. I have one-year experience as a Software Engineer at Electronic Arts. I have a keen interest in Machine Learning and AI with biology. I also love playing football, tennis and running.

PROGRAMMING SKILLS

Languages: Python, Java, JavaScript, HTML, CSS, C, C++, C#, SQL, Verilog, ARM Assembly

Technologies: Git, MySQL, Visual Studio Code, Unity

EDUCATION

09/2023 - 06/2027	University of Manchester Computer Science BSc Year 1: 79% Year 2: 73% (First Class) Computer Engineering (82%), Computer Architecture (73%), Mathematics (76%), Operating Systems (78%), Algorithms and Data Structures, Introduction to AI, Machine Learning, Software Engineering	Undergraduate Degree
09/2021 - 06/2023	Brighton, Hove and Sussex Sixth Form College Computer Science: A*, Maths: A*, Biology: A*, AS Further Maths: A	College

PROJECTS

C#	Evolution Simulation - A level coursework mark 70/70 Developed in Unity with C# for A-level coursework, achieving full marks. Involved procedural generation of a random 3D map with water and terrain using Perlin noise. It involved the life cycle of Rabbits with basic attributes - eating, drinking and reproduction - which evolved over time. This is a basic form of AI, representing 'Survival of the Fittest' and showing a real-life example of a genetic algorithm.
R	University College London (UCL) Short Course in Data Science with R A national short course focused in R, in which I won the competition at the end. It involved creating, testing and using different data models.
JavaScript, PHP HTML, CSS MySQL	Fitness Application I worked with a team of seven students during my first year at university to develop a fitness application that received a mark of 90%. It helped users plan and achieve weekly fitness goals, providing them with stats of workouts.
React, Go	Photoline As part of the GreatUniHack 2024, at University of Manchester, a team of 4 including myself created Photoline. Made using React, along with PrimeReact, for the front-end and Go for the back-end. Photoline is an application which helps users capture memories during their life, similar to photo albums. It allows other users (friends) to add photos to collaborated memories. All memories are shown on the home page in a single chronological timeline as nodes.

EXPERIENCE

07/2025 - 07/2026	Software Engineer Intern • Provided high quality, production-ready code working within a team • Dealt with high pressure and responsibility • Led Server deployment for one of their biggest feature (Clan World Tours) releases on Golf Clash • Received 2 Employee of the Months and Finalist for Mobile Game Awards 2026 'Rising Star' award	Electronic Arts - EA Playdemic - Golf Clash
09/2020 - present	Tennis Coach (Qualified) • Provided high quality, award winning and friendly tennis coaching • This included lesson planning, practical group and individual training sessions • Front of house work, including bar and cafe work	Encore Tennis - Queens Park Tennis Club Brighton
08/2023 - 09/2024	Bartender • Provided friendly and quick customer service, in a pressured environment, dealing with multiple orders, using electronic tills, serving drinks and dealing with public enquiries. Including festival environments	MINT and HRH

AWARDS & LEADERSHIP

- Average of 3.8 grades higher per subject than predicted grades (GCSEs) – making the local newspaper, The Argus
- Carbon Literacy Qualification short course
- Manchester Marathon and Nottingham Half Ironman
- Employee of the Month February and March at EA Playdemic
